	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Pull images and corresponding terms from an API ● Display images at random intervals ● Open form when user clicks on an image ● Display an indication if response matches	**Schedule - (For V2.0+)** ● Track and display images user has collected ● Store and include user-uploaded image-term pairs ● Setting to adjust time between pop ups ● Streaks, point system to buy power ups (e.g. streak freezes)
Not Important	**Delegate - (Use a library)** ● Use chrome.storage API to track user data instead of manually saving JSON files ● Use PokéAPI or REST Countries API instead of my own image database ● Use FileReader() instead of writing my own file reader	**Delete - (Cut it)** ● Export and import collections of image-term pairs ● Implement simple-spaced repetition algorithms ● Global or friends leaderboards which track points ● Support non-Chromium browsers or mobile users
